2 A rotatable shunting socket housing for telecommunication devices includes a body having two sockets respectively defined at two opposite side 3 thereof. Each of the sockets is provided with a plurality of metal feet. A cover is 4 mounted on a side of the body and between the sockets. A connector is rotatably 5 6 mounted on the cover, and has a plug provided at an exterior side thereof. The 7 plug is perpendicular to the sockets and electrically connected with the metal feet. 8 The body and the cover can be rotated about the connector, and plugs of 9 mounting cords inserted in the can be parallel to a wall, so that the mounting
